ABOUT

I turn ambiguous, system-level problems into clear, buildable design solutions. My work spans 0-to-1 consumer products, enterprise AI governance platforms, and internal tools. I set direction at the architecture level, stay hands-on through interaction details, and partner closely through development reviews — using structured thinking to deconstruct complex business scenarios, establish reusable design patterns, validate design value through data, and drive large-scale internal rollout of high-quality products.

EXPERIENCE

PayPal Sr. UX Designer

02.2022 – 08.2026

Cosmos.AI / AI Marketplace

Rebuilt the IA and interaction design of an enterprise AI asset governance platform, unifying how MCPs, Skills, and Plugins are discovered, consumed, published, and reviewed, and resolving inconsistent maintenance across multiple teams. Achievements include 300+ MCPs in production, migration of the entire Skills repository to serve as the certified entry point, and Plugins coverage across 11 business lines.

Employee Virtual Assistant

Led 0-to-1 experience design for Enterprise Assistant on desktop and mobile, spanning requirement analysis, solution definition, interaction modeling, and implementation. Partnered with business and engineering teams to ship and roll out company-wide.

Intranet Hubs

Led 0-to-1 design of lightweight internal tools (IMP, TIP, MyHub), turning complex business logic into clear design models and workflow patterns through end-to-end role and scenario analysis — improving cross-role collaboration and system learnability.

Business Components

Designed Hub products for functional departments — Financial Hub, Legal Hub, Merchant Onboarding. Abstracted recurring needs into a shared business component library, resulting in 40% higher component reuse, 30% shorter delivery cycles, and consistent experience across teams.

ByteDance UX Intern

07.2021 – 12.2021

Monetization Design Team

Contributed to TikTok in-feed ad formats, including a new “tile” format that increased visibility and click-through potential without disrupting the browsing experience. Supported experience design across search, e-commerce, and native ad formats.

EDUCATION

10.2020 – 02.2022

University of the Arts London
MSc Creative Computing

09.2016 – 06.2020

Huazhong University of Science and Technology
BA Product Design
